

UDRC Pi2 / Pi3 gets new ircNodeDashboard CPU data panel

I requested from NW Digital a CPU, Uptime and Temperature addition to the iNodeDashboard. John Hays K7VE was very fast to respond and make changes now available at <https://github.com/johnhays/ircNodeDashboard>

CPU Status

Uptime (Days HH:MM:SS)	0 09:02:56
Load Average	0.09 0.07 0.08 1/185 1282
CPU Temperature	36.86C 98.34F

Uptime and CPU temperature is self-explanatory but the Load Average required the following description.

The first three fields in this file are load average figures giving the number of jobs in the run queue (state R) or waiting for disk I/O (state D) **averaged over 1, 5, and 15 minutes**. They are the same as the load average numbers given by uptime and other programs.

The fourth field consists of two numbers separated by a slash (/). The first of these is the number of currently executing kernel scheduling entities (**processes, threads**); this will be less than or equal to the number of CPUs. The value after the slash is the number of kernel scheduling entities that currently exist on the system.

The fifth field is the **PID** (Process ID) of the process that was most recently created on the system.

Multipurpose gateways

You can put the IP address or DNS address into your browser for viewing the XLX dashboard you choose or enter into the DExtra_Host.txt or DCS_Host.txt file for direct connection.

See this URL for the most up to date list: <http://xrefl.net>

To register your new number with John, K6KD, <http://xrefl.boards.net>

<http://www.dstar101.com/XLXreflectors.htm>

A lot of the XRF reflectors are linked to XLX so it is possible to simply choose an XRF reflector to connect to a multi-purpose XLX reflector.

A current list of XLX reflectors is updated at ZL2VH here: <http://zl2vh.org.nz/assets/d-star-hosts/xlx-reflectors.txt>

DCS005 has moved to XLX. Look here: <http://www.ircddb.org.uk/xlx/index.php>

ZL Host lists

ZL gateways and hotspots.

On the Branch 63 site you can retrieve the host files at any time. They are small text files.

Title is "ZL Gateways and Hotspot Host files"

Alternatively here. <http://z12vh.org.nz/assets/d-star-hosts/>

ircDDB Visibility

For those who want to be visible on the ircDDB "live" list.

<http://www.ircddb.net/live.htm>

Do the following from this URL:

<http://ircddb.net/live-vis.html>

UR:VIS ON and then transmit once.

Then revert the UR:CQCQCQ

Once you transmit via an ircDDB enabled gateway using RF your call sign will be seen to be live on the dashboard and also listed on the ircDDB "last heard" list on the local dashboard.
